

The fast traveller

Tunnel system DokaMT

The Formwork Experts.

The fast traveller – Tunnel system DokaMT

The DokaMT tunnel system is a rentable solution for short to medium-length mined tunnelling projects. Pre-assembled units keep assembly time short and operation is all-hydraulic, so your tunnel project can move ahead quickly and efficiently.

Economical

- Flexible standard system with durable steel form-facing. Many system components are rentable
- Adaptability and re-usability of the systems
- Steel panels SL-1 are robust, so high numbers of use cycles

Fast

- Short planning times, because of few individual parts
- Hydraulic formwork solutions and electric driving units for fast cycles
- Pre-assembled units and standard system parts keep assembly times short

Safe

- Integrated working platforms and ladderways
- Optimised stripping distances for cleaning the form-facing
- Large drive-through access openings for site traffic
- Clearly structured documentation from assembly drawings to risk assessment
- CE mark is standard in Europe

Formwork and expertise from a single source

Doka is your full-service partner on complex tunnel projects – from planning through project management to solutions that work, complete with fully integrated concrete placing and external vibrators – everything from a single source.

Sustainability due to

re-usability and high proportion of rentable components

At the touch of a button

Both the hydraulics and the electric driving units have pushbutton control.

Variable-radius steel panels

The steel panels adapt easily to the structure's radius during assembly and are re-usable on widely differing projects.

Repositioning gantry

Large drive-through access openings, so site traffic is not obstructed. DokaMT has been used on end-to-end bottom slabs and also on strip foundations.
