Ladder system XS

Safety on all up/down access routes

www.doka.com

Safety on all up/down access routes

System-based ladderways with integral ladder cages can be attached to Doka wall and column formwork in a few simple steps. These safety accessories can be mounted to the formwork while this is still placed flat on the ground. This ensures complete safety, right from the word "go".

High safety

with a thoroughly engineered system

The ladder system and cage ensure safe, fast working

- complete safety when climbing up to, or down from, working platforms
- complies with all statutory regulations
- proven Doka quality, with hot-dip galvanised ladders and ladder cages

Ensures smooth workflows

by reducing downtimes

Safe working means fast working

- having safe up/down access makes for a smooth, efficient construction workflow
- working in safe surroundings boosts your site-crews' motivation

Simple to deploy – anywhere

with only a small number of different system-based ladders

One single system for all up/down access routes to work-platforms; compatible with

- all Doka wall formwork, including circular formwork and Doka supporting construction frames
- all Doka column formwork systems
- all Doka climbing formwork systems, Doka tunnel formwork and the Doka cantilever forming traveller

Optimum safety on up/down access routes
