The safety barrier system for formwork, construction shells and pre-cast members

This safety system is the universal solution for all edge protection tasks. Ideal for use as fall protection on Doka wall and slab formwork, on construction shells and on pre-cast members.

All-in-one system for fall protection

on formwork, construction shells and pre-cast members

Multi-functional

- with only one handrail post for all types of edge protection
- for formwork, stairways and structure edges
- by various connection parts covering all applications

Quick and easy installation

with easy-click function for higher productivity

Ergonomically engineered

- for fast, self-explanatory use through logical structure
- for easy handling
- thanks to stable lightweight construction
- through captive parts, which save additional costs

Revolutionary height enhancement

up to 1.80m with 20% less handrail posts

This clever system

- provides full safety up to 1.20m, with only one handrail post type
- can simply be extended to 1.80m with an adapter post
- covers all applications perfectly with only two handrail post types

Proven safety

for purchase or rent

Gain experience while renting and buy if necessary

- hot-dip galvanized and extremely stable
- complies with EN 13374 and EN 12811
- calculation guide including wind-loads

Edge protection system XP – one type of handrail post for all types of edge protection (timber, grating and scaffold tubes)

Easy-Click function

Practical connectors for all requirements as wall and slab formwork, construction shells and pre-cast members
