Formwork & Scaffolding.
We make it work.

DokaFit Wall

Quality meets Value. Fit for purpose.

Designed for the construction of concrete walls, columns and basements. DokaFit Wall is a cost-effective crane formwork solution for all types of projects where quality and speed are required.

Cost-Effective

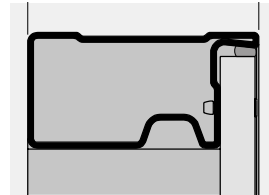

- Universally suitable for foundation, wall and column applications
- 18mm high-grade birch plywood ensures a high number of reuses and reduces replacement costs
- Adjustable to all building geometries due to 15cm panel grid from 0.30m to 1.20m

Fast and simple assembly

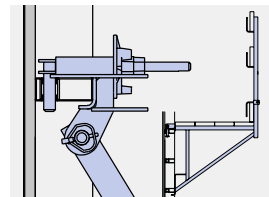

- Universal panel 1.20m enables easy forming of columns up to 1.05m x 1.05m
- Symmetrical tie-hole grid on standard panels ensures easy set-up
- Conical tie holes allow horizontal and vertical adjustment and facilitate installation

Durable and reliable

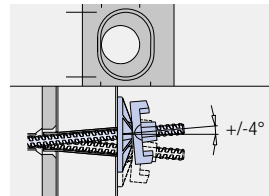

- 2.5mm robust frame profile prevents panels from damages and ensures a long lifespan
- Powder coating protects against corrosion and makes cleaning easy
- Fast concrete pouring due to maximum concrete pressure of 70 kN/m² for walls and 80 kN/m² for columns according DIN 18218 and DIN 18202

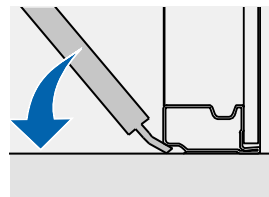

A
Robust steel frame with 18mm birch plywood, 2.5mm profile thickness, 120mm frame height

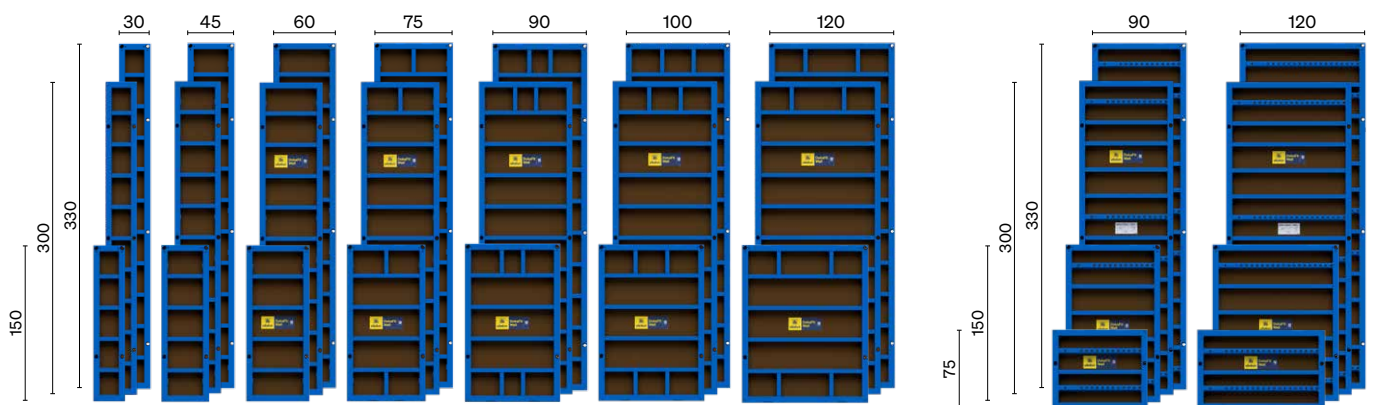

B
Easy access of props and brackets

C
Conical tie hole for fast and easy anchor installation

D
Setting recess for easy panel adjustment

DokaFit Wall element grid in various sizes for perfect adaptability.
