Framed formwork **Alu-Framax Xlife**

The lightweight aluminium framed formwork
for forming with or without a crane

www.doka.com

The lightweight aluminium framed formwork for forming with or without a crane

With its low weight, Alu-Framax Xlife brings all the benefits of Framax Xlife framed formwork to craneless jobsites as well – also seamlessly combined with Framax Xlife, of course.

Lightweight and versatile

thanks to sturdy aluminium profile frame

- the low panel weight reduces the work-strain associated with hand-set forming, yet the panels have a high load capacity of 60 kN/m²
- the frames are made of torsion-proof hollow aluminium profiles, so can also be shifted by crane
- seamless transitioning to Framax Xlife makes operations easier to break down into crane-handled and man-handled zones, permitting flexible logistics and fast workflow on the site

Cost-effective

because of its outstanding system attributes

- high numbers of repeat uses made possible by its excellent manufacturing quality and extra-durable Xlife-sheet
- high load capacity thanks to top-quality forged connector components
- smaller number of (expensive) closure zones, due to the consistent 15 cm increment grid
- using the single-side-operable tying system Monotec optimises workflows in confined spaces as well

Economical, fast and safe at non-crane-assisted sites, too

Easy handling and planning

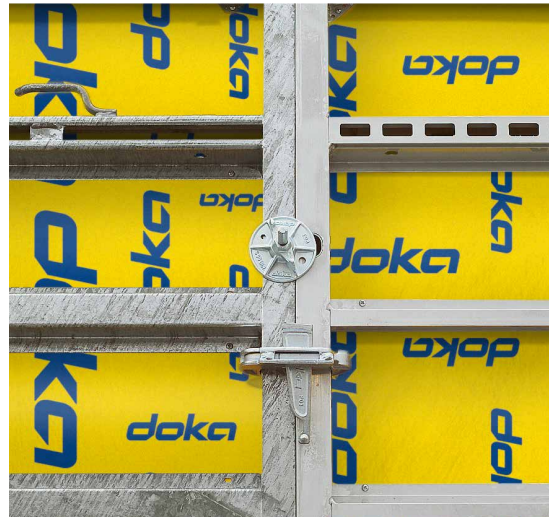

thanks to practical panel size-grid

- the ingeniously co-ordinated panel formats, with their logical size-grid, help you make optimum use of formwork commissioning quantities
- universal panels, for practical corner configurations and column formworks
- top-quality transparent powder-coating makes for easy cleaning and uniform frame appearance, even after many repeat uses
- fast, easy planning with the Tipos planning software

Superlative concrete results

facilitated by practical product details

- clean concrete finish from the high-grade Xlife sheet with its plastic-enhanced surface
- the ingeniously co-ordinated panel formats permit a neat joint pattern even when combining upright and horizontal panels
- no screw imprints in the concrete, as the formwork sheet is screwed on from the rear
- the neat negative frame-imprints in the concrete minimise any finishing-work

Alu-Framax Xlife and Framax Xlife are fully compatible.
