The universal, cost-saving shoring system for heavy loads

High-strength, three-dimensional shoring structures are easy to build with the ingenious Doka UniKit modular system. It carries heavy loads in a very wide range of site applications, for example on infrastructure projects and on power-plant builds.

Universal

- Versatile and multi-functional modular system
- Modular system grid makes it adaptable to different structure geometries
- Universally usable components for straightforward solutions on site

Cost-saving

- High proportion of rentable standard components to reduce cost of investment
- Pre-assembly is possible, so less craneage
- Compact for transport, saves on logistics costs
- economical investment due to versatile applications

Easy

- Easy to erect, simple and safe with only three basic components: U-profiles, splice plates, struts
- Individual components are light, so manual pre-assembly is possible
- Single-source 'formwork and scaffold' complete solution, so everything is combinable
- Number of different connections is limited, so assembly is simple and logical

The three basic components of Doka UniKit: U-profiles, splice plates and struts

UniKit shoring towers with load-bearing capacity of up to 480 kN per leg.
