The ultra-light supporting construction frame for single-sided walls

The Supporting construction frame AL is an extremely lightweight support structure for single-sided wall formwork systems that allow craneless working.

Easy and efficient handling

thanks to lightweight aluminium frames

- reduced crane time due to manual assembly and shifting
- high ergonomics as a result of lightweight frames (assembled weight 55 kg)
- quick assembly thanks to foldable design
- faster bracing by using Staxo cross-bracings

High flexibility

due to easy combination with all Doka framed formwork systems

- suitable for many different applications such as renovations and craneless jobsites
- simple aligning to uneven ground by using the adjustable spindle
- easy adaptable to wall heights of up to 3,30 m by using Extension AL 0.30m

Compatibility with Doka's framed formwork systems allows to use the Supporting Construction Frame AL all areas of application.
