

# Doka Slipform

**doka**

Bauwerke gleiten  
in Doka-Qualität

## Aldermanbury Square

London | UK

Construction of a 60m high rise core. Complete enclosure of the slipform system with solid Doka Xbright elements. Pre-assembly off site and assembly on site under the supervision of an experienced Doka supervisor. **Challenges:** short construction time, high safety requirements, vulnerability to wind and tight project budget. **Solution:** The integration of the Xbright plastic panels as a protection screen for the slipform system not only creates a bright and safe working environment, but the proven noise reduction of the Xbright enclosure often makes slipforming in an urban environment possible in the first place.

**Location:** London, UK

**Year of completion:** 2023

**Project duration:** 86 days

**Construction company:** Alpine Chian  
Teck Realty Pte. Ltd

**Structure:** High rise core

**Height of structure:** 60m

**Wall thickness:** 0.25m / 0.30m

**Systems used:** Doka Slipform,  
DokaXbright protection screen
