The Formwork Experts.

FreeFalcon – The mobile fall protection

Construction projects get more and more challenging, but at the same time they have to be completed more rapidly and more economically. Sacrificing safety, however, is wholly unacceptable. The current system-independent safety regulations in the slab-form-working sector only conditionally satisfy the requirements for occupational health and safety and ergonomics. The FreeFalcon with its safety unit closes this gap. It is the ideal synthesis of safety and freedom of movement.

All-round safety

due to integrated safety details

- Working in safety at the drop-off edge without trip hazards because the anchor point is always above head height
- Unrestricted freedom of movement with 360° fall protection and a working radius of 10 m
- Compliant to rules of Suva (CH), BGGau (D) and BauV (AT)

Quickly ready to use

thanks to easy handling

- Immediately ready, no anchoring to the structure no planning, installation work or costs for anchoring, no effects on the structure
- Horizontal repositioning is easy – a job for one person with a pallet lifter

FreeFalcon

The FreeFalcon protects construction crew members whenever work at drop-off edges is temporarily unavoidable.

Standard: EN 795:2012 Typ E

Weight: 450 kg

FreeFalcon PCC

FreeFalcon PCC has been specially developed for use on sectional slabs and secures workers on the slab edge while assembling the sectional slabs.

Standard: EN 795:2012 Typ B

Weight: 595 kg

Experience the FreeFalcon in Augmented Reality

Install the Doka AR app on your smartphone or tablet and call up the 'Scan AR marker' function.

Then point the camera at the front page of this leaflet to view the three-dimensional model of the FreeFalcon.
