The practical circular formwork for exact curves

Circular formwork H20 is a practical circular formwork system that delivers smooth, curved walls from radii of 3.50 m upward – steplessly.

Highly cost-efficient

right from the very first time of use

The system reduces the rental and wage costs at your site because

- it only needs a small number of form-ties – just one form-tie per 1.50 m²
- only small commissioning quantities are needed, as it adapts effortlessly to any layout
- the system elements are pre-assembled and are readied for use simply by setting the desired radius with the adjusting spindles

Radii can be continuously adjusted

simply by turning spindles

Circular formwork H20 stands out for great flexibility, thanks to its

- practical height grid
- exact curves from a radius of 3.50 m upward
- flexible, heavy-duty Dokaplex 21 mm form-ply

Rapid working

and ease of handling

Efficient construction workflow, as

- there is only one connecting device (Adjustable clamp 10cm)
- it can easily be combined with Framax Xlife, Alu-Framax Xlife and Column formwork RS
- setting the radii is easy – simply by turning spindles
- radii are easy to check, using flexible templates

The practical height grid and the systematic spacing of the form-ties make it possible to form widely differing height-combinations quickly and easily.

Optimum element size-grid with only two different widths of element (inside element 2.40 m, outside element 2.50 m)
