Protection screen **Xclimb 60**

A guided climbing system for
full perimeter protection

www.doka.com

A guided climbing system for full perimeter protection

The full-area enclosure around the perimeter of the building enables all work to be carried out in complete safety, protected from all weather conditions. A loading platform can be integrated into the protection screen for straightforward, safe repositioning of slab formwork, tools and other materials.

Huge flexibility

in on-site use

Benefit from the system's multi-use capability, with features like

- individually adaptable working platforms
- optimized cycle times, as loads can be transferred into either the current or previous casting section
- the option of using it as a self-climbed system if there are crane-time constraints, with hydraulic lifting appliances easily moved by hand
- the ability to reposition the protection screen even while the slab formwork is still in place

High standard of safety

for your site crew

Safety is built-in to all phases of the work, as

- the system is anchored to the structure at all times
- the guided repositioning operation is independent of the weather
- the crew are protected by an enclosure that can be adapted to meet site-specific requirements

Simple modular design concept

based on a practical "construction-kit" system

Save time and money because of

- the high degree of pre-assembly available
- the way the system simplifies planning, utilization and handling

The Protection Screen Xclimb 60 provides full highrise perimeter protection at the Legacy Tower, Chicago.

Think safety // Doka, for safety's sake

At Doka, safety is written very large – it's what our safety symbol stands for. You'll find it pointing to wherever Doka customers enjoy particularly great safety benefits, both technically and personally, because your safety means a lot to us.
