General return information

Tips for your return bookings!

1. In connection with deliveries - save underlay timber/shrouds and stacking cones. If they are missing for returns, these can be re-ordered from Doka.
2. Clean Doka's articles from release agent, concrete, nails/screws and eps insulation to avoid extra costs.
3. Pack the items according to our return instructions to optimize and have a safe transport.
4. Count the items you intend to return. E-mail or send the return delivery note with the driver. Return labels are available on request from Doka.

Following booking information is needed:

1. Customer name and project name
2. Desired date of return
3. Material and estimated quantity to be returned (preferably by loading meters)
4. Other requests, such as time and loading possibilities

Returns must be booked at least 5 working days before pick-up.

This applies both to own booked transport and transport booked by Doka.

Bookings are made via:

- E-mail: returanmalan.sverige@doka.com
- Telephone: +46(0)10-451 63 00
- Customer portal: www.myDoka.com

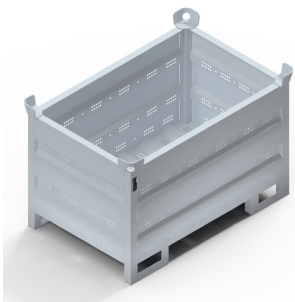

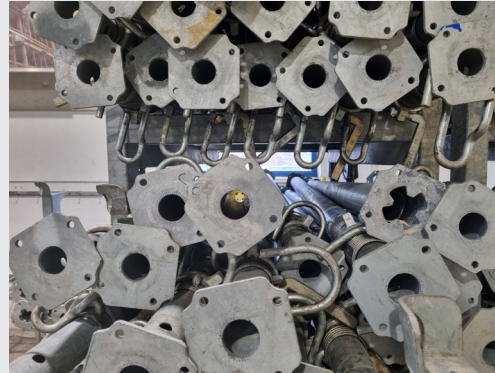

Materials returned to us must be packed according to our instructions and loaded in such a way that safe transport and following unloading with a forklift can take place. If you follow our instructions, you will reduce your freight costs and avoid other unnecessary costs.

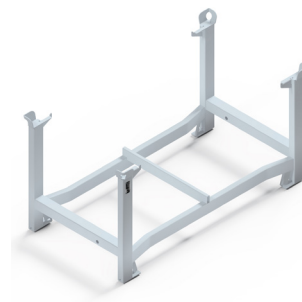

Note! It must be possible to unload the goods with forklift from the side as shown in picture above.

Multi-trip packaging

Oversized packaging results in possible additional costs for the customer and can cause major risks during both loading and unloading.

Art. no.	Art. name	Weight
583011000	Doka multi-trip transport box 1,20x0,80 m	70 kg

Dokaset

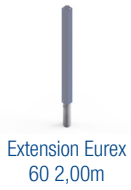

The formwork elements should lie with the plywood downwards. Do not apply release agent to the elements.

The panel in the bottom must have underlay timber underneath to prevent damage to the plywood during transport.

The circled lifting eyes should be on the left in the direction of travel of the lorry. This is so that we can unload with a forklift. If lifting lugs have been removed at the job site, they must be reinstalled on the panels before return.
